

POLICY COMPLIANCE CHECKER

An autonomous AI agent that scans documents, emails, policies, and systems to find gaps or compliance risks in real time.

-  **REAL-TIME SCANNING**
Instantly reviews documents & communications
-  **VIOLATION DETECTION**
Identify policy breaches instantly
-  **SMART RECOMMENDATIONS**
Get context-aware suggestions for corrective action.
-  **SAVE TIME**
Automate reviews, focus on impact
-  **IMPROVE ACCURACY**
Consistent, unbiased evaluation
-  **EMPOWER TEAMS**
Enable confidence at every level
-  **ENTERPRISE READY**
Secure. Scalable. Built for business-critical workflows

AUTONOMOUS AI
Works 24/7 to ensure continuous compliance

SMART & SECURE
Enterprise-grade security with AI precision

SCALABLE SOLUTION
Built for organizations of every size

REAL-TIME INSIGHTS
Instant detection of risks and violations

BUSINESS CHALLENGE

The Compliance Crisis in Enterprise Communications

Large organizations exchange thousands of emails, documents, and internal communications daily. Manual compliance monitoring can't scale — leaving organizations dangerously exposed.

THE STAKES ARE HIGH

- **Regulatory fines & penalties**
Non-compliance can result in hefty fines and legal repercussions.
- **Reputational damage**
Breaches erode trust and impact brand credibility.
- **Data security risks**
Sensitive information exposed through unmonitored channels.
- **Legal & audit challenges**
Incomplete records and poor visibility complicate audits and investigations.

WHAT IT MEANS FOR YOUR BUSINESS

- **Limited Visibility**
Blind spots across emails, chats, files, and systems.
- **Slow Response**
Delayed detection leads to bigger risks.
- **Inconsistent Enforcement**
Policies applied manually can lead to human error.
- **Operational Overhead**
High effort, low efficiency, and stretched resources.
- **Proactive Compliance Is No Longer Optional. It's Business Critical.**

PROPOSED SOLUTION

Multi-Layer AI Compliance Architecture

A powerful, multi-stage AI pipeline that ingests, understands, and analyzes policies to deliver accurate insights and proactive compliance intelligence.

01 POLICY UPLOAD

Securely upload policies in any format.

File Validation & Parsing
Supports PDF, DOCX, TXT, and more

Structured & Validated Input

02 VECTOR EMBEDDINGS

Convert policy content into semantic vectors.

AI Embedding Models
Capture meaning, context & relationships

Semantic Representation

03 DOCUMENT INGESTION

Organize and store document chunks intelligently.

Chunking & Indexing
Smart segmentation & metadata tagging

Indexed & Searchable Knowledge Base

04 RAG RETRIEVAL

Retrieve relevant policy context for accurate analysis.

Retrieval Augmented Generation (RAG)
Combines LLM reasoning with trusted data

Context-Aware AI Insights

CORE TECHNOLOGY STACK

FastAPI + LangChain

High-performance backend orchestration and API management.

GPT-4o / Azure OpenAI

Advanced LLM capabilities for understanding and reasoning over policy data.

FAISS / ChromaDB

Blazing-fast vector search and semantic similarity retrieval.

React / Streamlit

Modern, interactive dashboards for visibility and decision support.

SYSTEM OUTPUT

Violation Explanation

Plain-language summaries of policy breaches with clear context.

Severity Classification

AI-powered risk scoring: Critical, High, Medium, Low.

Critical

High

Medium

Low

Safer Rewrite Suggestions

AI-generated, compliant alternatives to reduce risk.

Smarter policies.
Stronger compliance.
Built for the future.

From Prototype to Enterprise Platform

A phased approach to build, validate, and scale intelligent compliance.

“Transforming enterprise compliance from manual auditing to *intelligent AI-driven governance*.”

7-STEP AI PIPELINE

End-to-end intelligent workflow from policy to insights.

REAL-TIME DETECTION

Instant policy violation alerts with actionable insights.

MULTI-ORG SCALABILITY

Built for scale with isolated multi-tenant architecture.

Traditional Compliance vs. AI-Powered Governance

Smarter. Faster. Context-Aware. Built for the Modern Enterprise.

 TRADITIONAL SYSTEMS	COMPLIANCEAI PLATFORM 
 Static keyword rules Rigid, rule-based systems that miss context.	 Contextual LLM reasoning Understands context, nuances, and relationships.
 Generic policy matching One-size-fits-all approach with high false positives.	 Organization-specific RAG Tailored retrieval using your policy corpus and internal data.
 No semantic understanding Unable to grasp meaning, intent, or relationships.	 Intent & context detection AI models detect intent, sentiment, and policy implications.
 Manual audit cycles Time-consuming, error-prone, and resource intensive.	 Real-time automated scanning Continuous monitoring with instant alerts and insights.
 No explainability Decisions are opaque with no policy traceability.	 Policy-referenced reports Every finding is traceable to exact policy sources.

VS.

ENTERPRISE-READY FEATURES

RBAC + ABAC

Role & attribute-based access control for granular permissions and data security.

Multi-Tenant

Isolated architecture per organization with complete data separation.

Explainable AI

Exact policy references on every report for transparency and audit readiness.

Policy Hierarchies

Department & regional rule support with inheritance and override capabilities.
